## 1 Mathematical objects

The following terms could be defined in an algebraic way. We assume the most common field,  $\mathbf{R}$ .

- a) scalar: single number,  $x \in \mathbb{R}$

Example:

$$x' = 5$$

- b) vector: ordered array,  $\mathbf{x} \in \mathbb{R}^n, n \in \mathbb{N}$

Example:

$$\mathbf{x}' = (4, 5)$$

- c) matrix: two-dimensional array,  $\mathbf{A} \in \mathbb{R}^{n \times m}, n, m \in \mathbb{N}$

Example:

$$\mathbf{A}' \in \mathbb{R}^{2 \times 2}$$

$$\mathbf{A}' = \begin{bmatrix} 5 & 2 \\ 0 & 1 \end{bmatrix}$$

- d) tensor: multi-dimensional array,  $\mathbf{T} \in \mathbb{R}^{\mathbf{v}}, \mathbf{v} \in \mathbb{N}^m$

Example:

$$\mathbf{T}' \in \mathbb{R}^{2 \times 2 \times 2}$$

$$\mathbf{T}'_{1,*,*} = \begin{bmatrix} 5 & 2 \\ 0 & 1 \end{bmatrix}$$

$$\mathbf{T}'_{2,*,*} = \begin{bmatrix} 1 & 3 \\ -2 & 5 \end{bmatrix}$$

## 2 Vectors in machine learning

Every datapoint  $x$  represents a student and the features are the following:

$$\mathbf{features} = \begin{bmatrix} \text{no. finished assignments} \\ \text{points in the exam} \end{bmatrix}$$

Vector representation:

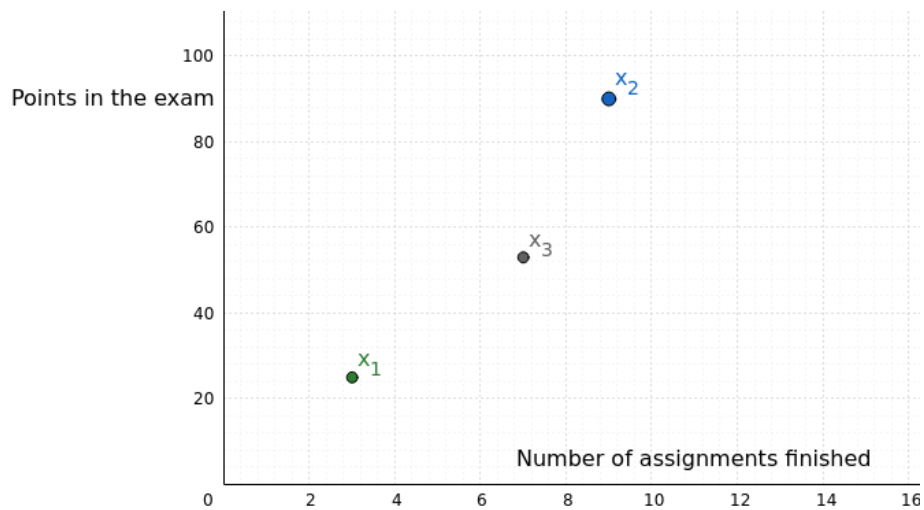

$$\mathbf{x}_1 = \begin{bmatrix} 3 \\ 25 \end{bmatrix}$$

$$\mathbf{x}_2 = \begin{bmatrix} 9 \\ 90 \end{bmatrix}$$

$$\mathbf{x}_3 = \begin{bmatrix} 7 \\ 53 \end{bmatrix}$$

Matrix representation:

$$\mathbf{X} = \begin{bmatrix} 3 & 25 \\ 9 & 90 \\ 7 & 53 \end{bmatrix}$$

### 3 Operations on vectors and matrices

a)

$$\begin{bmatrix} 1.5 & 2 & 0.5 \\ 0 & 1 & 1.5 \end{bmatrix}$$

b)

$$\begin{bmatrix} 15 \\ 17 \end{bmatrix}$$

c)

$$\begin{bmatrix} 4 & 2 & -9 \\ -3 & 8 & 0 \end{bmatrix}$$

d)

$$\begin{bmatrix} 8 & -2 \\ 14 & -4 \end{bmatrix}$$

e) Impossible, because the operation is not defined on the matrices of these dimensions.

### 4 Multiplication properties, types of matrices

#### 4.1

a)

$$\mathbf{A} \in \mathbf{R}^{n \times m} \text{ is symmetric} \Leftrightarrow \mathbf{A}^T = \mathbf{A}$$

b)

$$\mathbf{A} \in \mathbf{R}^{n \times m} \text{ is orthogonal} \Leftrightarrow \mathbf{A}^T = \mathbf{A}^{-1}$$

c)

$$\mathbf{v} \in \mathbf{R}^n \text{ is a unit vector} \Leftrightarrow |\mathbf{v}| = 1$$
$$|\cdot| \text{ is a vector norm}$$

d)

$$\mathbf{v} \perp \mathbf{u} \Leftrightarrow \mathbf{v} \cdot \mathbf{u} = 0$$

#### 4.2

a)

$$(B\lambda I)^T C = \lambda(BI)^T C = \lambda I^T B^T C = \lambda BC \quad \Rightarrow c), m \times n$$

b)

$$A^{-1}(CA^{-1})^T \lambda = A^{-1}(A^{-1})^T C^T \lambda = A^{-1}AC^T \lambda = IC^T \lambda = C^T \lambda \quad \Rightarrow a), n \times m$$

c)

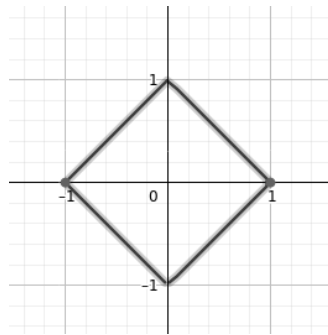

$$AA^T B^T C = IB^T C = BC \quad \Rightarrow c), m \times n$$

## 5 Vector norms

$$|\mathbf{a}|_1 = 6$$

$$|\mathbf{a}|_2 = \sqrt{14}$$

a) L1

b) L2
